XMULTIPLE Releases Internet Radio Chipset/Software for companies to integrate the internet radio into their products – Hear the World

'Listen to your favorite internet radio station everywhere around the world"

Las Vegas, NV, Januray 7, 2008 - Today at the CES show in Las Vegas, XMULTIPLE announced today the release of the SQ Internet Radio and chipset and software for companies to integrate the internet radio into their products. In addition, Xmultiple announced an OEM program for companies who would like to private label the standalone SQ internet radio unit displayed at the CES show.

SQ Internet radio that can be connected via wired Ethernet or Wi-Fi. The unit has a USB 2.0 port and an SQ card slot, and plays back MP3, WMA and WAV files. Its radio station list can be customized and updated automatically via the vTuner Internet site.

The unit features front panel controls and a remote control. It supports UPnP media server and automatically tunes in to the last played channel upon power-on. It has an alarm clock that can be synchronized with Internet time. Output ports include a 3.5mm headphone jack and an RCA audio lineout.

Advanced Features:

- Listen to the radio stations of your home land around the world
- Grasp the latest news and the most popular music all over the world
- Connect radio stations around the world to learn different languages
- Configure the internet settings by wired Ethernet or wireless LAN
- Automatic update listed radio stations from vTuner internet portal
- Support 20 extra radio stations besides the default vTuner internet portal stations
- Support high quality sound by connecting to high class speakers
- View the station information by the LCD screen
